Subject: New Mexico
Attachments: ATT00001.txt; LDNR primacy.pdf

Perhaps today on the teams meeting in a smaller group after the general introductions and discussions we can have a chat about New Mexico and some discussions I have been invited to regarding Class VI applications and primacy in that state. In these future discussions I would like to provide interested parties with the EPA Guidance documents that Nancy has so graciously provided and the LDNR primacy application. I am not familiar with the audience but my belief is that the folks will be primarily business folks and not technical but I will generally touch on the benefits of:

- Communication with regulatory staff
- An exhaustive evaluation of the Area of Review with a strong understanding of the existing wellbores in and adjacent to a projected plume
- Iterative plume modeling with an industry accepted software populated with actual field data, stratigraphic well derived logging and coring , 2 D and 3 D seismic
- Extensive planning with regard to plume migration monitoring

Looking forward to the Teams meeting today.

Regards,

Maurice

Sempra LNG is not the same company as the California utilities, San Diego Gas & Electric Company (SDG&E) or Southern California Gas Company (SoCalGas), and Sempra LNG is not regulated by the California Public Utilities Commission.
